JMP TO MANUFACTURE IMPELLERS FOR ALBIN PUMP MARINE

JMP Marine, manufacturer of quality engine and genset cooling pumps, has signed an agreement to supply Albin Pump Marine with flexible impellers for its OEM products. The move strengthens the business relationship and opens doors to US and European expansion for both companies.

A proprietary blend of materials with a special wax infusion and brass inserts set JMP flexible impellers apart from the competition. Resistant to salt, oils and chemicals, they're heat-resistant to 180° F, and deliver the superior reliability and wear-resistance OEMs demand.

"The JMP brand has a reputation for quality within the marine industry," said Brad Burton, Albin Pump Marine general manager. "Their long-lasting flexible impellers will make excellent additions to the pumps we offer." Talks are underway for JMP to begin manufacturing some of Albin's complete pump assemblies in its ISO 9001-certified plant.

106-year old Albin Pump Marine manufactures pumps, air and water heaters, marine sanitation devices and ventilation blowers. The company launched its North American presence in January 2018. Its website is www.albinpumpmarine.com.
