FOR WESTERBEKE REPLACEMENT GENSET PUMPS, JMP STANDS OUT

Westerbeke marine diesel generators are known for their long-lasting durability. But when their raw water engine cooling pumps begin to fail, it's time for a JMP Marine replacement.

The JPR-WB08IP is a universal direct replacement for Westerbeke 48080, 37431 and 33636, and Johnson 10-36006. Manufactured in JMP Marine's ISO-9001 certified factory, it's 100% compatible and outperforms the original equipment. The heavy-duty cast bronze body is engineered for maximum flow rate—over eight gpm at 2,500 rpm—and machined to exacting tolerances. This cooling pump has corrosion-resistant fittings, a mechanical seal, stainless steel wear plates and a marine-grade non-magnetic shaft. It includes a mounting gasket.

The flexible impeller in the JMP Marine JPR-WB08IP is made from a proprietary wax-infused polymer that resists salt, oil, chemicals and excessive heat. US Navy testing found it outlasted other brands by a two-to-one margin.

Compact at only 3.6" L x 3.4" W x 3.2" H, the JPR-WB08IP weighs approximately 3 lbs. It has standard 3/8" NPT ports for a straightforward installation.

JMP Marine's replacement engine cooling pump for Westerbeke generator sets comes with a one-year limited manufacturer's warranty and has an MSRP of \$499. The company also offers Major and Minor Service Kits.
