## JMP ENGINEERS KEEL COOLER PUMP FOR MITSUBISHI

JMP Corporation has engineered a keel cooler pump for Mitsubishi Turbocharger and Engine America, Inc. Its new ME5000R provides the massive flow that the 630 hp @ 1,600 / 684 hp @ 1,800 rpm S6R-Y3MPTAW and 803 hp @ 1,400 rpm S6R2- Y3MPTAW Tier 3-certified diesel engines need to maintain maximum performance.

Supplied by JMP Marine, the ME5000 series can be configured three ways to meet Mitsubishi's requirements: ME5000A for engine S6A3, ME5000B for engine S6B5 and ME5000R for engines S6R and S6R2. Rated at 158 gph at 2,850 rpm, it has 2" NPT in and 1.5" NPT out ports. Compact and lightweight, it's 8.85" L x 7.71" W x 8.58" H and weighs 34 lbs.

Mitsubishi's S6R-Y3MPTAW and S6R2-Y3MPTAW are ideal for heavy-duty workboats, tugs and push boats, cargo and other and offshore vessels. Fully mechanical, they're simple yet powerful engines that are easy to maintain.

"We chose JMP because they have specialized in marine pumps for more than two decades," said Ted Han, VP engine sales, Mitsubishi Turbocharger and Engine America, Inc. "They're reliable and responsive to our needs."

For over 40 years, JMP Corporation has manufactured marine components in its ISO 9001-certified facility. The company has distributors in 22 countries across the globe, with eight in North America alone.
