JMP DEBUTS PUMPS FOR KUBOTA-BASED MARINE GENSETS

JMP Corporation has debuted five replacement raw water cooling pumps for Kubota-based generators. The new offerings expand JMP's footprint within the growing marine genset market.

Kubota engines are popular with marine generator brands such as Fischer Panda, Mase and Whisper Power. With a JMP replacement pump, any Kubota engine can be marinized. And soon, JMP will introduce a full line-up for Kubota-based Onan gensets.

Offering 100% compatibility, JMP pumps outperform their OEM counterparts. They're engineered for massive water flow with minimal back pressure. Built with solid machined bronze bodies, they have corrosion-resistant fittings, a mechanical seal, stainless steel wear plates and a marine-grade non-magnetic shaft.

The flexible impellers in the new JMP pumps are made from a proprietary wax-infused polymer that resists salt, oil, chemicals and excessive heat. The US Navy tested them and found they outlasted other brands by a two-to-one margin.

JPR-KU08/KU25 and JPR-10IP/15IP/20IP are for Fisher Panda, Mase and another European small marine genset brands. They come with a one-year limited warranty.

-more-

JMP Corporation manufactures general-purpose and engine cooling pumps, flexible impellers and sea strainers in its ISO-9001 certified factory. It also offers Major and Minor Service Kits for its pumps.
