JMP ADDS NEW REPLACEMENT PUMP FOR CATERPILLAR

JMP has added a new model to its robust line of replacement raw water flexible impeller cooling pumps for Caterpillar. Engineered for commercial and recreational vessels, the JPR-CT0150 fits C1.2/2.2 marine diesel engines and is a direct 100% drop-in replacement for part number 425-5421.

JMP replacement pumps for Caterpillar are manufactured in JMP's ISO 9001-certified factory to exacting tolerances. Superior to OEM, the cast bronze bodies deliver better water flow for improved engine performance. They feature marine-grade non-magnetic shafts, high-performance impellers and mechanical seals for utmost reliability.

Replacement pumps from JMP utilize the company's robust flexible impellers. Superior over neoprene and nitrile, they're made of a proprietary wax-infused formula that resists the degradation and resultant deforming that leads to high engine temperatures. They're so reliable, the US Navy found they outlasted other brands two to one.

JMP Corporation's JPR-CT0150 costs \$675. It comes with a one-year manufacturers limited warranty.
