FOR WORKBOATS, JMP FOR YANMAR IS HARD TO BEAT

For Yanmar engines aboard a workboat, heavy use and long hours are all too common. Maintaining maximum water flow is critical to keeping these powerplants operating at peak performance and extending their service lives. Superior to OEM, eight models of JMP raw water cooling pumps are available to fit over 65 Yanmar engine models.

Machined to exacting tolerances in JMP Corporation's ISO 9001-certified factory, these engine cooling pumps provide the ease of 100% drop-in replacement. Heavy-duty cast bronze bodies with polished linings provide superior flow to OEM. They have corrosion-resistant fittings, mechanical seals, stainless steel wear plates and marine-grade non-magnetic shafts. Mounting gaskets and O-rings are included.

All engine cooling pumps for Yanmar utilize JMP's renowned flexible impellers. Made from a proprietary wax-infused polymer, they resist salt, oil, chemicals and excessive heat. The US Navy found the material outlasted other brands by a margin of two-to-one.

MSRP for JMP replacement raw water cooling pumps for Yanmar starts at \$297.25. They come with a one-year limited manufacturer's warranty.
