JMP FORGES ALLIANCE WITH KING DOLPHIN PROPELLER

JMP Corporation, manufacturer of engine cooling pumps, flexible impellers and sea strainers, has forged a strategic alliance with King Dolphin, a Dongsan Tech Co. brand. The two companies draw on their respective strengths to supply specialized components for each other's products.

King Dolphin is a leading supplier of aftermarket propellers for Honda, Mercury, Suzuki and Yamaha outboards worldwide. Using only virgin aluminum, it casts and machines its products to exacting tolerances. This makes the company ideal for manufacturing JMP engine cooling pump pullies. Extremely light and balanced, they spin without the minute wobbling that can lead to shaft distortion and pump failure.

JMP Corporation manufactures propeller hub inserts for King Dolphin using the same proprietary material found in its flexible impellers. Made of a unique, wax-infused blend, it absorbs the shock created by shifting and is resistant to friction-generated heat from contamination, without sacrificing the ability to break away if the propeller strikes an object.

"JMP and King Dolphin share a commitment to quality," said Frederick Leidecker, JMP Marine USA operations manager. "The alliance we've forged provides OEMs and end-users with premium products and
